Linear Regression

Arunkumar Sadhasivam

Lead Java Engineer | Azure AI & GenAI Certified | Spring Boot
Microservices

Milpitas, California, United States

Summary

Senior Software Engineer with 10+ years of experience implementing secure, cloud-native, and scalable API platforms. Experienced in evolving distributed architectures from RMI, CORBA, and enterprise SOA to modern microservices and experience in designing event-driven streaming pipelines that enrich data and efficiently synchronize with multi-tenant downstream systems ensuring governance limits, fault tolerance, and high-volume scalability through distributed, partitioned, and replicated architectures.

Expertise includes Java/Spring Boot microservices, API Gateway-based security, and IAM integrations using ADAM, SiteMinder, Okta, OAuth2, SAML, PKI, and other enterprise integration frameworks. Proven ability to deploy and scale APIs on containerized cloud platforms, with recent focus on GenAI-powered APIs, RAG pipelines, and vector databases.

Background includes leading technical projects across healthcare, airline, manufacturing, and high-tech sectors, delivering enterprise integration, data governance, and AI-enabled API solutions

Enterprise Development:

=====

- Proficient in Enterprise Java/J2EE, Spring Framework, ORM technologies, Content Management Systems, Angular 7, and Big Data solutions.

API Development & Integration:

=====

- Extensive experience designing and implementing APIs across multiple paradigms—from RMI and CORBA to modern REST and GraphQL architectures. Skilled in Spring, Spring Boot, WSDL, SOAP, IBM WebSphere JAXWS, Apache CXF, and various marshalling techniques including JIBX, JAXB, and Protobuf.

Data Engineering:

=====

- ETL data processing using SSIS
- Experience in SQL Server, PostgreSQL, Teradata, MongoDB and Oracle databases

Security & Identity Management:

=====

- Implemented enterprise-level security solutions using CA SiteMinder 12, Active Directory, HSM, JCE, and OKTA.

Integration & Streaming:

=====

- Expert in real-time data processing and integration using SnapLogic, Apache Kafka, Marketo, and Mule ESB.

Web Content Management

=====

- Deep knowledge of Adobe Experience Manager (AEM) 6.0-6.5, IBM Fatwire Content Server, and IBM JSR 168 Portlet development.

Experience

Stanford Children's Health | Lucile Packard Children's Hospital
Stanford

Senior Lead Software Engineer

August 2022 - Present (3 years 6 months)

Menlo Park, California, United States

Adobe

Senior API & Integration Engineer -Marketing Solution

October 2019 - August 2022 (2 years 11 months)

United States

:

: Leads from Salesforce, campaigns, and conferences sync from Hadoop to Marketo via batch jobs, but discrepancies cause missed leads.

: Created Marketo smartlist to export leads, loaded into dynamic Hadoop table, and ran comparison script against source data to identify gaps.

- : Synced 100% of missed leads automatically, eliminated discrepancies, and reduced future misses by scheduling daily reconciliation runs.
- Involving in working with Integration and developing pipeline using Snaplogic, JMS, Kafka, Splunk, HDFS, hive, SQL-server and salesforce.
- Worked on creating reusable API components and deploy in the cloud to be consumed by other applications.
- Experience in handling streaming data effectively without loss of data and improving processing speed. creating topics, consumer groups adhere to pub/sub messaging model for effective publishing and consumption of streaming data.
- Worked on snaplogic to process data from various sources for marketing leads generation.
- Worked on migrating all campaign lead flows to Salesforce Flows.
- Have Good Exposure towards various EIA Patterns like Router, Filters, Message Translator, Messaging, Dead Letter Queue, Message Sequence, Splitter, Aggregator, Dynamic Router.
- Worked on implementing generic retry mechanism adhering to available retry policies in snaplogic to make sure reliable and effective processing of streaming data.
- Worked on Snaplogic pipeline Automation to generate reports of outofsync data between hive and marketo using marketo Bulk API and handling de-dupe using marketo merge api.
- Experience in Creating splunk dashboards, scheduling splunk alerts for topics lag and other Errors in splunk
- Developing REST based Reactive API microservices using spring Boot and make it consumed by pipelines.

FatPipe Networks

Software Engineer

October 2016 - September 2019 (3 years)

Mountain View, California, United States

:

:No telemetry visibility for MVPN traffic across customer base
Hardware-accelerated MVPN on Ethernet cards lacked usage monitoring
Blind scalability planning and reactive failure debugging.

:Built real-time dashboard tracking request volume by region/
customer
Implemented heartbeat monitoring for MVPN hardware health
Added regional traffic analytics and failure alerting.

:85% faster issue resolution (from hours to minutes)40% improved scalability
planning via traffic pattern insights99.8% MVPN uptime with proactive
heartbeat failure detection.

Developed a high-performance network monitoring and optimization
application on custom Linux (LFY) that intercepts and analyzes network
requests at the Ethernet layer, enabling real-time traffic management and
intelligent routing decisions for enterprise SD-WAN infrastructure.

- Architected and implemented a dynamic client IP monitoring system
integrated with FatPipe MVVPN (Multi-VPN) hardware, achieving significant
internet speed improvements through intelligent packet routing and load
balancing across multiple WAN connections.
- Designed and built a Protocol Buffers (protobuf)-based configuration
management system that automatically generates and deploys MVVPN
configurations on-the-fly when new clients are added, reducing provisioning
time from hours to seconds and eliminating manual configuration errors.
- Created a low-level network interception layer that operates between the
Ethernet driver and application layer, providing deep packet inspection
capabilities while maintaining minimal latency overhead (<5ms) for mission-
critical enterprise traffic.
- Implemented automated configuration orchestration using Protocol Buffers
for serialization, enabling seamless integration between the monitoring
application and FatPipe MVVPN hardware, resulting in zero-downtime client
onboarding and policy updates.

Delta Air Lines

Sr. API Developer

September 2013 - September 2016 (3 years 1 month)

:

:Shared JAR for flight details logic across 3 airline portfolios (Crew, Dangerous
Goods, Others)Version conflicts when portfolios used outdated JARs caused
data inconsistencies25% error rate in cross-portfolio flight data sync.

:Designed SOA architecture replacing JAR sharing with SOA based
servicesBuilt centralized SOAP endpoint from scratch with request/response
trackingAdded usage monitoring to track requests processed portfolio-wise.

:100% version consistency across all portfolios
60% faster API response times
(150ms → 60ms)
95% reduction in data sync errors (25% → 1.25%)
Portfolio-wise usage telemetry with 99.9% uptime tracking

individual contributions :

=====

- 1) developed batch jobs from scratch which could process information available in different file format and uploading to B2B server for business Analysis.
- 2) Identified tightly coupled interfaces in existing application and moved to loosely coupled web service using IBM JAXWS.
- 3) Worked as a individual contributor to start project from scratch with Top down approach -WSDL Design, creating web service provider, consumer using IBM JAX-WS implementation

Automation:

=====

Developed a tool which could compare 2 Jars and could generate summary.

Technologies Worked:

=====

ibatis, java, IBM JAXWS, Jsoup(SFTP), Mule ESB, Spark, HDFS(YARN), R
Programming

3M

3 years 9 months

Sr. API & Security Developer

March 2013 - September 2013 (7 months)

Chennai, Tamil Nadu, India

: ()

: User/password transmitted unencrypted over wire, triggering OWASP security vulnerabilities high-severity security findings across web, portlet, mobile apps.

Language encoding mismatches between JS encryption/Java decryption.

: Implemented DWR (Direct Web Remoting) with public/private key encryption
Encrypted credentials in UI layer, decrypted server-side in same language (Java)
Standardized encryption across web, portlet, and mobile interfaces.

: 100% OWASP compliance, cleared all security findings
40% faster encryption/decryption (same-language processing) enhanced Application security across web, mobile and portlet.

Individual contributions

=====

1)Migrated 3M ENL (Enterprise Network Login) application from legacy api to spring API.

2)Internationalized 3M search portlet to search content ,documents based on language selected.

Automation:

=====

1)Developed a html generated tool which could download ENL pages in different languages and can be used by siteminder team to intercept request to collect user details using Form credential collector(fcc).

2)involved in Automation of pulling data from Prod to QA for internal dev testing for client -3M using SSIS.

Technologies Worked:

=====

Hibernate,webservice,WebSphere,SqlServer,Siteminder,ADAM,Spring(DAO,MVC,W Content Server,IBM JSR 168 Portlet,Inquia

Associate Projects

August 2012 - March 2013 (8 months)

Via CTS shanghai, china

: ()

:Multiple round trips for user authentication: SiteMinder → WebSphere → Landing page2-3 second login delays due to sequential API calls30% abandonment rate during peak authentication traffic.

:Store landing pages in SiteMinder template page, when siteminder receive request through FCC, render appropriate template from siteminder ,

eliminate WebSphere redirect round trip.authorize Single response flow:

SiteMinder authenticates → returns pre-loaded landing page avoid round trip to websphere.

:70% faster login times (3s → 0.9s average)25% drop in authentication abandonment rate50% reduced server load during peak traffic.

1)Worked as a Tech lead, involved in transition of projects to china.

2)Train the team in china to look in to projects independently.

3)Help team to deliver tasks in time.

Programming Analyst

January 2010 - July 2012 (2 years 7 months)

- 1)involved in Design,development and testing.
- 2)Developing tools to improve work efficiency.
- 3)Involved in development of Application using spring,struts,JSF
- 4)work directly with clients to resolve any issues.
- 5)Involved in handling security using CA-Siteminder ,Activedirectory and making site adhere to OWASP Standards.
- 5)Knowledge in working in managed service mode.

Automation:

=====

- 1.Developed a shift management system to track shift in the account -internal

Technologies Worked:

=====

JSF ibm faces,websphere

Hoya

API Developer

May 2007 - December 2009 (2 years 8 months)

: ()

:Patient records siloed across network hospitals requiring manual record transportDoctors lacked real-time access to complete patient history40% treatment delays due to missing prior visit documentation.

:Implemented HL7 standards for Japanese government patient serializationBuilt secure data sharing using Hoken ID (insurance ID) as universal patient identifierCreated interoperable API for connected hospitals to access records instantly.

:100% real-time patient data access across network hospitals75% reduction in treatment delays (40% → 10%)Eliminated manual record transport, enabling seamless doctor handoffs.

Individual contributions

=====

- 1)Developed a component /UI to make patient details online using HL7 file format (japanese govt) for client -Appledoctor

Automation

=====

- 1)Migrated SSO from Windows application to java application - client -SRM
- 2)Developed a Application to make fees payment online for client -SRM
- 3)Involved in creating template code to automate JSF Screen generation for client -Hoya.

Technologies Worked:

=====

JSF Myfaces, Jboss, Tomcat, Postgres, JAXB, JSP, J2EE, Oracle

Education

Anna University Chennai

Bachelor's degree, Information Technology

Western Governors University

Artificial Intelligence · (May 2025)
